JOB MARKET PAPER

Refrigeration, Food Security, and Nutrition: Evidence from Ghana (with François Cohen)
Food insecurity in low-income countries is typically analysed through agricultural production and purchasing power, with little attention paid to downstream food distribution. We study the welfare consequences of disruptions in final-stage food storage. Our identification exploits appliance breakdowns in Ghana, comparing households with functioning and broken refrigerators purchased at the same time and at similar prices. Breakdowns increase perceived food insecurity by one-third and reduce consumption of animal-sourced foods, lowering intake of vitamin B12. These findings highlight household refrigeration as an underappreciated lever to improve diets and reduce widespread micronutrient deficiencies as electrification rapidly expands.
Awards: IREA Best Working Paper Award (Jan 2026); Best Paper Award, UB PhD in Economics Workshop (Dec 2025).
Earlier version: IREA Working Paper IR25/23, "Refrigeration, Diets and Human Health: Evidence from Ghana".
